### ABOUT

Our PRO Series Tower Docks are a great option for those with shallower waters (Typically less than 10ft) and seeking less maintenance. The Seamless design appears identical to a Pro Series Pole Dock, and performs uniformly. However, integrated into the initial dock frame is the tower component used for Cantilevering during the winter months. This provides peace of mind knowing your investment will not be subject to ice damage.

Once Spring rolls around the dock is lowered back into the water and the tower conveniently sits back into the dock frame. Any necessary components used for winter servicing are cleanly stored beneath in the frame. Lastly place the deck panels back on, and you're ready for the summer months with out getting wet. Starting from the bottom, we use aluminum Poles attached to adjustable sleeves welded into the custom aluminum frame.

### WARRANTY

All Pro Series Tower Docks are backed with a 15 year warranty on the aluminum frames.
